

## New CO<sub>2</sub> incubator

with optional fast H<sub>2</sub>O<sub>2</sub> decontamination function

The optional H<sub>2</sub>O<sub>2</sub> generator evaporates hydrogen peroxide by ultrasonic wave and hydrogen peroxide gas decontaminates inside chamber. The required time from the start of decontamination process till its completion is merely 130 minute.

In addition to SANYO proprietary active background contamination control by UV lamp, the contamination prevention ability has become even stronger with the newly developed H<sub>2</sub>O<sub>2</sub> decontamination system

MCO-19AIC(UV)
